

260A ALIGNMENT STATION

| | | | | |
|--|--|--|--|-----------|
| <p>The Rucker and Kolls Model 260A Alignment Station incorporates a 4" standard or optional 6" chuck, X-Y positioning, theta adjustment and dual z-motion control handles (left and right) which are essential for probe repair and maintenance. The XY microscope positioner allows viewing of the entire surface of a large die or substrate without moving the stage, providing a total 4" X-Y movement. The Model 260A is designed and built for maximum mechanical stability, with precise micrometer X, Y, Z positioning. Ring inserts are sold separately for 4.5" wide probe cards or 6.5" wide cards.</p> | APPLICATION | | Used for critical probe card repair / maintenance. | |
